The pig population in April 1991

On the following pages you will find the results of the pig census carried out in April this year and the forecast gross indigenous production of pigs. One of the reasons for the late publication of the rapid report is that the Federal Republic of Germany was allowed a longer time period in which to communicate the results from the new Länder. This was necessary as both the institutes responsible for data acquisition and the reporting units themselves in these Länder had to make certain adjustments following the unification of Germany. The legal basis for this is given in Commission Regulation (EEC) N° 1057/91 of 26 April 1991.

As regards the population figures themselves, a Community level comparison of the results for April this year with those for April last year is only possible if the five new Länder are excluded, as no official figures are available for the former GDR for April 1990. The results for the Federal Republic of Germany have thus been given in a separate table, showing the results for December last year as well, and broken down by old and new Länder. This table also shows that the reduced pig population in the Federal Republic is primarily due to the development in the former GDR.

Comment: the figures for the old Länder are a result of a representative census carried out on 3 April 1991 and are definitive. The figures for the new Länder are the results of an agricultural census carried out there in April and May and are provisional.
